Overview

The SG UK Defensive Growth Plan 11 (UK Four) ("the Plan") is a 6 year investment plan linked to the performance of the FTSE 100 Index. The Plan aims to provide an enhanced return at Maturity equal to 5x the growth of the FTSE 100 Index starting at 90% of the initial level of the Index, capped at 60%.

Target Market

This product was primarily designed for UK Retail, Advised only, investors who are willing to invest for a period of up to 6 years, looking for a potential growth rather than income, where the return is linked to the performance of the FTSE 100 Index and where they accept the risk of losing some or all of the capital invested.

Past performance simulations¹

In order to demonstrate how the Plan would have performed had it been purchased in the past, we carry out a series of tests to determine the Plan's 'Past Performance Simulations'. We apply the exact parameters of the Plan to historic price information for six year rolling periods ending between 15/05/2001 and 10/05/2016, which provides 3911 six year periods to observe.

Future performance simulations²

We also conduct Future Performance Simulations to see how the Plan may perform in the future. We test the exact parameters of the Plan against three theoretical market scenarios; positive, neutral and negative. These scenarios are formulated by Societe Generale using projections of how markets are expected to perform in the future.

Overview

The SG UK Kick-Out Plan 24 (UK Four) ("the Plan") is a maximum 6 year investment plan linked to the FTSE 100 Index. The Plan can expire after year 2, paying a Gross Return equivalent to 9.75% per year and returning your client's capital in full. At Maturity, capital is protected as long as the FTSE 100 Index has not fallen by more than 50% at any point during the Investment Term.

Target Market

This product was primarily designed for UK Retail, Advised only, investors who are willing to invest for a period of up to 6 years, looking for a potential growth rather than income, where the return is linked to the performance of the FTSE 100 Index and where they accept the risk of losing some or all of the capital invested.

Past performance simulations¹

In order to demonstrate how the Plan would have performed had it been purchased in the past, we carry out a series of tests to determine the Plan's 'Past Performance Simulations'. We apply the exact parameters of the Plan to historic price information for six year rolling periods ending between 11/05/2001 and 11/05/2016, which provides 3791 six year periods to observe.

Future performance simulations²

We also conduct Future Performance Simulations to see how the Plan may perform in the future. We test the exact parameters of the Plan against three theoretical market scenarios; positive, neutral and negative. These scenarios are formulated by Societe Generale using projections of how markets are expected to perform in the future.

Overview

The SG UK Kick-Out Plan 5 (UK Gilts) ("the Plan") is a maximum 6 year investment plan linked to the FTSE 100 Index. The Plan can expire after year 2, paying a Gross Return equivalent to 7.00% per year and returning your client's capital in full. At Maturity, capital is protected as long as the FTSE 100 Index has not fallen by more than 50% on the Investment End Date.

Target Market

This product was primarily designed for UK Retail, Advised only, investors who are willing to invest for a period of up to 6 years, looking for a potential growth rather than income, where the return is linked to the performance of the FTSE 100 Index and where they accept the risk of losing some or all of the capital invested.

Past performance simulations¹

In order to demonstrate how the Plan would have performed had it been purchased in the past, we carry out a series of tests to determine the Plan's 'Past Performance Simulations'. We apply the exact parameters of the Plan to historic price information for six year rolling periods ending between 10/05/2001 and 10/05/2016, which provides 3914 six year periods to observe.

Future performance simulations²

We also conduct Future Performance Simulations to see how the Plan may perform in the future. We test the exact parameters of the Plan against three theoretical market scenarios; positive, neutral and negative. These scenarios are formulated by Societe Generale using projections of how markets are expected to perform in the future.

*More information on the UKSPA Product Codes is available via www.ukspassociation.co.uk

**Not compounded.

Credit Default Information

In March 2016, Moody's published a report which examined the historic relationship between institutions' credit ratings and their respective rate of default. Below is an extract of data from this report which demonstrates a strong relationship between these two parameters.

Average 6 year Cumulative Issuer-Weighted Global Default Rates by Alphanumeric Rating, 1983 to 2015:

Credit Rating	Default Rate (%)
Aaa	0.102
Aa1	0.153
Aa2	0.450
Aa3	0.517
A1	1.131
A2	1.172
A3	1.171
Baa1	1.497
Baa2	2.029
Baa3	2.913
Ba1	6.821
Ba2	7.346
Ba3	16.444

Key Risks

You and your client should read the Product Brochure for a full description of all the risks involved in the Product:

Capital is at risk and your client could lose some or all of their capital.

Your client should only invest in these Plans if they do not need access to their money for the full Investment Term of six years. Early withdrawal may result in loss of capital.

The Plans are designed to provide the potential for a defined level of return which is dependent on the performance of the Underlying Assets. In order to achieve this level of return, capital will be put at risk. Your client could lose some or all of their investment.

The Plans are subject to maximum growth potential and do not invest directly in the shares of the Underlying Assets and therefore do not receive dividends from those companies; as such the returns could be lower than if your client invested directly in the shares of the Index.

As with all similar structured investments, in the event of Counterparty or Issuer insolvency your client will not have recourse to the Financial Services Compensation Scheme. It is the investor who faces these risks rather than the Plan Manager, Walker Crips Structured Investments.

Risk associated with "UK Four" Counterparty Risk

If SG Issuer and Societe Generale were to default or become insolvent, the Plans will terminate immediately. The amount that your client receives back for their investment will depend on i) the market value of their Investment at that time and on ii) the value of the collateral assets at the time of expiry. Your client may receive back less than their initial investment.

If any one of the UK Four becomes subject to a Credit Event* during the Investment Term, 25% of the final value of your client's investment will be at risk for each of the UK Four institutions that has become subject to a Credit Event. The amount that they receive back will depend on the Recovery Rate defined for each UK Four institutions affected.

If any of the UK Four becomes subject to a Credit Event, re-payment of your client's initial investment and any return generated by the Plan may be delayed if no Recovery Rate is available at Maturity of the Plan.

Risk associated with "UK Gilts" Counterparty Risk

If SG Issuer and Societe Generale were to default or become insolvent, the Plans will terminate immediately. The amount that your client receives back for their investment will depend on i) the market value of their Investment at that time and on ii) the value of the collateral assets at the time of expiry. Your client may receive back less than their initial investment.

If the UK Government becomes subject to a Credit Event* during the Investment Term, 100% of your client's investment will be at risk. The amount that they receive back will depend on the Recovery Rate as defined by ISDA*

If the UK Government becomes subject to a Credit Event, re-payment of your client's initial investment and any return generated by the Plan may be delayed if no Recovery Rate is available at Maturity of the Plan.

**Such term as defined in the 2014 ISDA Credit Derivatives Definitions, as published by the International Swaps and Derivatives Association, Inc. ("ISDA"). For more information on Credit Events, please download our guide to managing Counterparty Risk which is available at: http://www.sgifa.co.uk/gettingstarted/counterparty_risk.php*

This document is issued in the U.K. by the London Branch of Societe Generale. Societe Generale is a French credit institution (bank) authorised and supervised by the European Central Bank (ECB) and the Autorité de Contrôle Prudentiel et de Résolution (ACPR) (the French Prudential Control and Resolution Authority) and regulated by the Autorité des marchés financiers (the French financial markets regulator) (AMF). Societe Generale, London Branch is authorised by the ECB, the ACPR and the Prudential Regulation Authority (PRA) and subject to limited regulation by the Financial Conduct Authority (FCA) and the PRA. Details about the extent of our authorisation, supervision and regulation by the above mentioned authorities are available from us on request.

Past performance simulations have been performed on the basis of the same underlying, redemption formula and duration for each Plan described in the brochure. The quoted levels of the FTSE 100 Index, EuroStoxx 50 Index and S&P 500 Index have been recorded on each day between 10/05/2001 and the 10/05/2016. Past performance simulations on historical market data allow for the calculation of the Plan's performance if it had been launched in the past. Such simulations provide a basis for modelling the Plan's behaviour during different phases in the market in past years. These simulations are in no way an indication of the actual performances of the Plan. The figures relating to future performance are a forecast and are not a reliable indicator of future results.

Telephone calls may be recorded and / or monitored for training and quality purposes.
